DETAILED ACTION

Claim Objections

1. Claim 2 is objected to because of the following informalities: the term "principle" should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 5 recites the limitation "the reinforcing box". There is insufficient antecedent basis for this limitation in the claim.
4. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 2 and 7-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Oehm (5,897,135).

Art Unit: 3616

Oehm discloses an airbag apparatus having an airbag module 2; a covering device 12 having a close and open position; an airbag located behind the cover; a mechanism having a first mechanism component 56 coupled to the airbag module; and second mechanism component 57 coupled to the covering device. The airbag module and the first mechanism component forms a unit ready for installation and the second mechanism component is installed separately from the first mechanism component, as shown in figure 3. The airbag module 20 forms, together with the first mechanism component 28 a unit ready for installation. Rogers, et al teaches traction elements wherein the traction elements are traction bands mounted on the end of the second mechanism component as integral parts (see figures 4-6), the traction bands are on or within a reinforcing box 20 which supports an orifice for the emergence of the airbag in an instrument panel 14. The second mechanism component 30 of the coupling mechanism and covering 22 thereof are led through pockets (the bottom of figure 3), which are integrated in an extruded profile of the airbag housing, and, on the opposite side, through putaways 42 of the reinforcing box 20, as shown in figure 3. A traction band loop and correspondingly shaped bolts 38 are provided, see figure 3. During or after the installation of the airbag apparatus behind a vehicle interior trim panel, the first mechanism component is brought into an active position with respect to the second mechanism component. The first and second mechanism are coupled to one another. With respect to claim 2, as components 56 and 57 are separate or different components, they would not touch one another prior to mounting or after demounting.

Allowable Subject Matter

7. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. Claims 5 and 6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Response to Arguments

9. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.
